

Hi, my name is PinHo Wang and I am a currently NEU student majoring in Computer System Engineering. For the past few years, I specialized in Optoelectronics particularly investigating electromagnetic by kinds of simulated methods, like FEM, FDTD. I have a strong background in analyzing problem and building a simulated model, and also some programming skills, like C++, Java, and Matlab.

While I was changing the field, I took some programming courses and accomplished my optoelectronics thesis in the same time. Both of these works got a great result. For example, I had a opportunity to publish my research to an international conference and I also had a good grade of these programming courses.

For the next phase of my career, I am interested in software position, particularly in data analysis. Finally, would you please provide some information regarding any co-op position within your company.
