

PinHo Wang is a graduated student of Computer System Engineering at Northeastern University. He used to do the research in Computational Photonics and Electromagnetics Laboratory in National Taiwan University using models to investigate the physics problems. For now, he studies particularly in data analyzing area. He has the basic concept of algorithms and data structures. Also, he is able to develop Java projects and familiar cooperate with team members in course projects. He has experienced developing MVC pattern and some system designing. In personality aspect, he is enthusiastic to programming and excited about real world challenge problems. He is very approachable and easy to cooperate with. He is responsibility and respects to his works.
